2. Zhang X, Yi N. Fast Zero-Inflated Negative Binomial Mixed Modeling Approach for Analyzing Longitudinal Metagenomics Data[J]. Bioinformatics, 2020.

Data summary

DiGiulio's Vaginal microbiome data is from 40 women. There are 927 samples(including covariates information) and 1271 OTU. Each woman has different observation weeks so it is not balanced.

Subject	obs_week_count
10003	8
10004	6
10005	9
10006	33
10008	16
10009	9
10011	1
10013	17
10014	26
10016	9

I specify the taxonomic level genus and filter top 10% readsum genus. We can use other taxonomic level.

- This is a part of baseline data set at genus level.

2. Lewis J D, Chen E Z, Baldassano R N, et al. Inflammation, antibiotics, and diet as environmental stressors of the gut microbiome in pediatric Crohn's disease[J]. Cell host & microbe, 2015, 18(4): 489-500.

Data Summary

These data are collected from 86 children. There are 335 samples and 105 genus in raw data. After filtering low depth samples (low non human reads) and combining the information covariates, there are 236 samples with 59 subjects. The observation time are the same (baseline, 1 week, 4 weeks, and 8 weeks). So it is balanced.

- This is a part of baseline data set at genus level.
